Certified AI Foundations Associate

Amit Kumar

System Software Engineer | Python | Performance & Debugging
Bengaluru, Karnataka, India

Summary

From building my first program in grade school to pursuing a Bachelor of Engineering in Computer Science, I have always been driven by a curiosity for technology and a passion for problem-solving. My experience spans developing software with Python and Java, working on projects involving AI, machine learning, and automation, and exploring database management with SQL.

I have completed certifications in SQL and AI & Machine Learning, and enjoy tackling challenges in computer vision and signal processing using tools like OpenCV and Git. I am especially interested in how technology can create innovative, real-world solutions, and am always eager to learn new frameworks or contribute to collaborative projects.

Currently, I am seeking opportunities to expand my skillset through internships, research, or open-source contributions. Let's connect if you are interested in collaborating or if you have opportunities where my skills can add value!

Experience

Bayer

6 months

AI Engineer Intern

January 2026 - March 2026 (3 months)

Bengaluru

Built and deployed multiple AI Agents and multi-agent systems focused on real-world applications using frameworks like CrewAI, AutoGen, and LangGraph.

- Developed a Career Digital Twin Agent to represent skills and interact with potential employers
- Built an SDR Agent to generate and send personalized sales emails automatically
- Created a Deep Research multi-agent system capable of performing extensive topic analysis
- Designed a Stock Picker Agent to automate investment research and decision-making
- Deployed a 4-Agent Engineering Team to manage, build, and test software applications using Docker
- Implemented an Operator-style browser agent that assists users in real-time workflows
- Built an Agent Creator system that generates and deploys new AI agents autonomously
- Completed a Capstone Trading Floor project with 4 autonomous agents powered by MCP servers and 40+ tools

Focused on Agentic AI, automation, and real-world system design, with hands-on experience in building scalable, production-ready AI workflows.

Software Development Engineer Intern

October 2025 - January 2026 (4 months)

Karnataka, India

Key Contributions

Enhanced TDMS territory intelligence by building and refining an interactive Village–FOT mapping experience using Vue.js + Leaflet, enabling users to explore coverage by State/District/Sub-district/Village and classification.

Integrated backend endpoints (Flask/APIs) to fetch GeoJSON polygon layers and territory metadata, improving map rendering accuracy and filter responsiveness.

Implemented a dynamic summary panel that updates based on selected filters (FOT, classification, geography) to reduce manual interpretation and improve decision speed for business users.

Supported the release cycle by validating changes in QA, troubleshooting defects, and coordinating fixes through GitHub (branches/PRs), ensuring clean deployments and smoother stakeholder reviews.

Tech: Vue.js, Leaflet, JavaScript, Python/Flask, GeoJSON, Git/GitHub, AWS.

Education

Visvesvaraya Technological University

Bachelor of Engineering - BE, Computer Science · (December 2022 - December 2026)

Kendriya Vidyalaya

· (January 2015 - March 2024)
